		Expected Maturity (months)	16-102 months

The unobservable inputs used to determine fair value of recurring Level 3 assets may have similar or diverging impacts on valuation. Significant increases and decreases in these inputs in isolation and interrelationships between those inputs could result in significantly higher or lower fair value measurement. Increases in projected collection rates in isolation would result in a higher fair value measurement, while increases in expected discount rates, projected default rates, and maturities of life settlement contracts, in isolation, would result in a lower fair value measurement.

For the period ended December 31, 2022, there have been no transfers between any of the fair value hierarchy levels. Transfers between Levels are recognized at period end.

For more information on the Fund's policy regarding valuation of investments and other significant accounting policies, please refer to the Fund's most recent semi-annual or annual financial statements.
